AWS CERTIFIED SOLUTIONS ARCHITECT AND CLOUD ENGINEER.

Experience designing, implementing and supporting secure cloud platforms for Government and Enterprise clients across Defence, Cyber Security and Digital Health Environments.

Skilled in AWS cloud-native services, Infrastructure as Code, platform engineering, Linux administration and DevOps practices. Hands-on experience delivering cloud migration, automation and operational support using Terraform, Kubernetes, Docker and Git-based workflows.

Former Australian Army Reserve Corporal with proven leadership, operational planning and stakeholder engagement skills, bringing a disciplined, adaptable and solutions-focused approach to complex technical environments.

KEY SKILLS AND EXPERTISE

Cloud Technologies

AWS (EC2, RDS, Lambda, CloudFormation, CodeCommit, CloudWatch, ElastiCache, Athena), Microsoft Azure

Infrastructure as Code

Terraform, AWS CloudFormation

Containers & Orchestration

Docker, Compose, EKS

Operating Systems

Linux (RHEL), Windows

Version Control & CI/CD

Git, GitLab, GitHub, AWS CodeCommit

Programming & Scripting

Bash, Python, SQL, JavaScript, HTML, CSS

Databases

Amazon RDS, SQL, Amazon Athena

Monitoring & Operations

Amazon CloudWatch, Incident Management, Production Support, System Monitoring

DevOps & Engineering Practices

Platform Engineering, Infrastructure Automation, Cloud Migration, Software Factory, Technical Documentation, Secure Development, Stakeholder Engagement

EDUCATION

AWS Cloud Practitioner AWS Certifications, Pearson VUE

AWS Certified Solutions Architect - Associate AWS Certifications, Pearson VUE

Microsoft Certified: AZ900 - Azure Fundamentals Microsoft Learn, Pearson VUE

AWS Cloud Practitioner AWS Certifications, Pearson VUE

PROFESSIONAL EXPERIENCE

Deloitte, Cloud & Engineering Senior Consultant - AWS Platform Engineering

May 2023 - July 2026

While at Deloitte, I contributed to multiple government programmes, delivering secure cloud and infrastructure solutions for nationally sensitive environments. My work focused on designing and engineering systems aligned with security frameworks such as ISM controls and Essential Eight requirements, with an emphasis on compliance, resilience, and operational integrity.

- Led the migration of two legacy enterprise applications from on-premises to AWS, significantly reducing downtime and improving application maintainability.
- Engineered Infrastructure as Code with Terraform to provision and manage AWS services such as EC2, RDS, Lambda, and ElastiCache, significantly enhancing deployment efficiency.
- Administered over 10 Linux (RHEL) environments and automated infrastructure deployment, minimising the risk of incidents and outages.
- Produced Secure Environment Design (SED) and technical documentation while collaborating with stakeholders to secure security and governance approvals, enabling projects to proceed successfully.
- Established Git-based version control practices and engineering standards to facilitate collaborative software development, improving team efficiency.
- Maintained production AWS infrastructure, Kubernetes workloads, and Linux systems to ensure high availability, operational stability, and secure service delivery.
- Onboarded new client environments through technical implementation and stakeholder engagement, enabling successful platform adoption and reliable service delivery.
- Investigated, managed and resolved production incidents to maintain platform availability and performance.

WithYouWithMe (WYWM), Consultant

May 2021 - May 2023

At With You With Me, I made the first major transition into a technology career, contributing to business-critical production support for the Australian Digital Health Agency's My Health Record reporting services, as well as designing and implementing proof-of-concept software solutions for a Pega low-code startup serving government clients in South Australia.

- Investigated production issues across Linux, SQL and VMware environments, facilitating restoration of service, resolving incidents, and maintaining platform stability.
- Delivered operational reporting and technical investigations for government stakeholders, improving visibility, supporting informed decision-making, and enabling timely issue resolution.
- Worked within incident, problem and change processes, ensuring controlled service restoration and reduced operational risk.
- Designed and implemented proof-of-concept software solutions for government clients, helping validate approaches, support Agile delivery, and improve team capability through continuous improvement.
- Worked within Agile delivery teams and collaborated with technical and business stakeholders, helping deliver proof-of-concept solutions aligned to client needs and project outcomes.
- Researched new technologies and shared knowledge across the team, helping improve team capability and support continuous improvement.

Australian Army Reserve, Corporal - Light Cavalry Scout

July 2014 - May 2023

Delivered leadership, communications and operational support within the Australian Army Reserve, leading small teams in high-pressure environments requiring teamwork, discipline and sound decision-making. Operated secure communications systems in accordance with Defence security requirements and planned field activities involving risk assessment, situational awareness and effective decision-making.

LOOKING AHEAD

Technology is a field that continually presents new opportunities to learn, build, and improve. I am motivated by curiosity and enjoy exploring new ideas, contributing to open-source projects, and taking on opportunities that support both professional growth and meaningful team impact.
